

COMPLETION SUMMER 2020

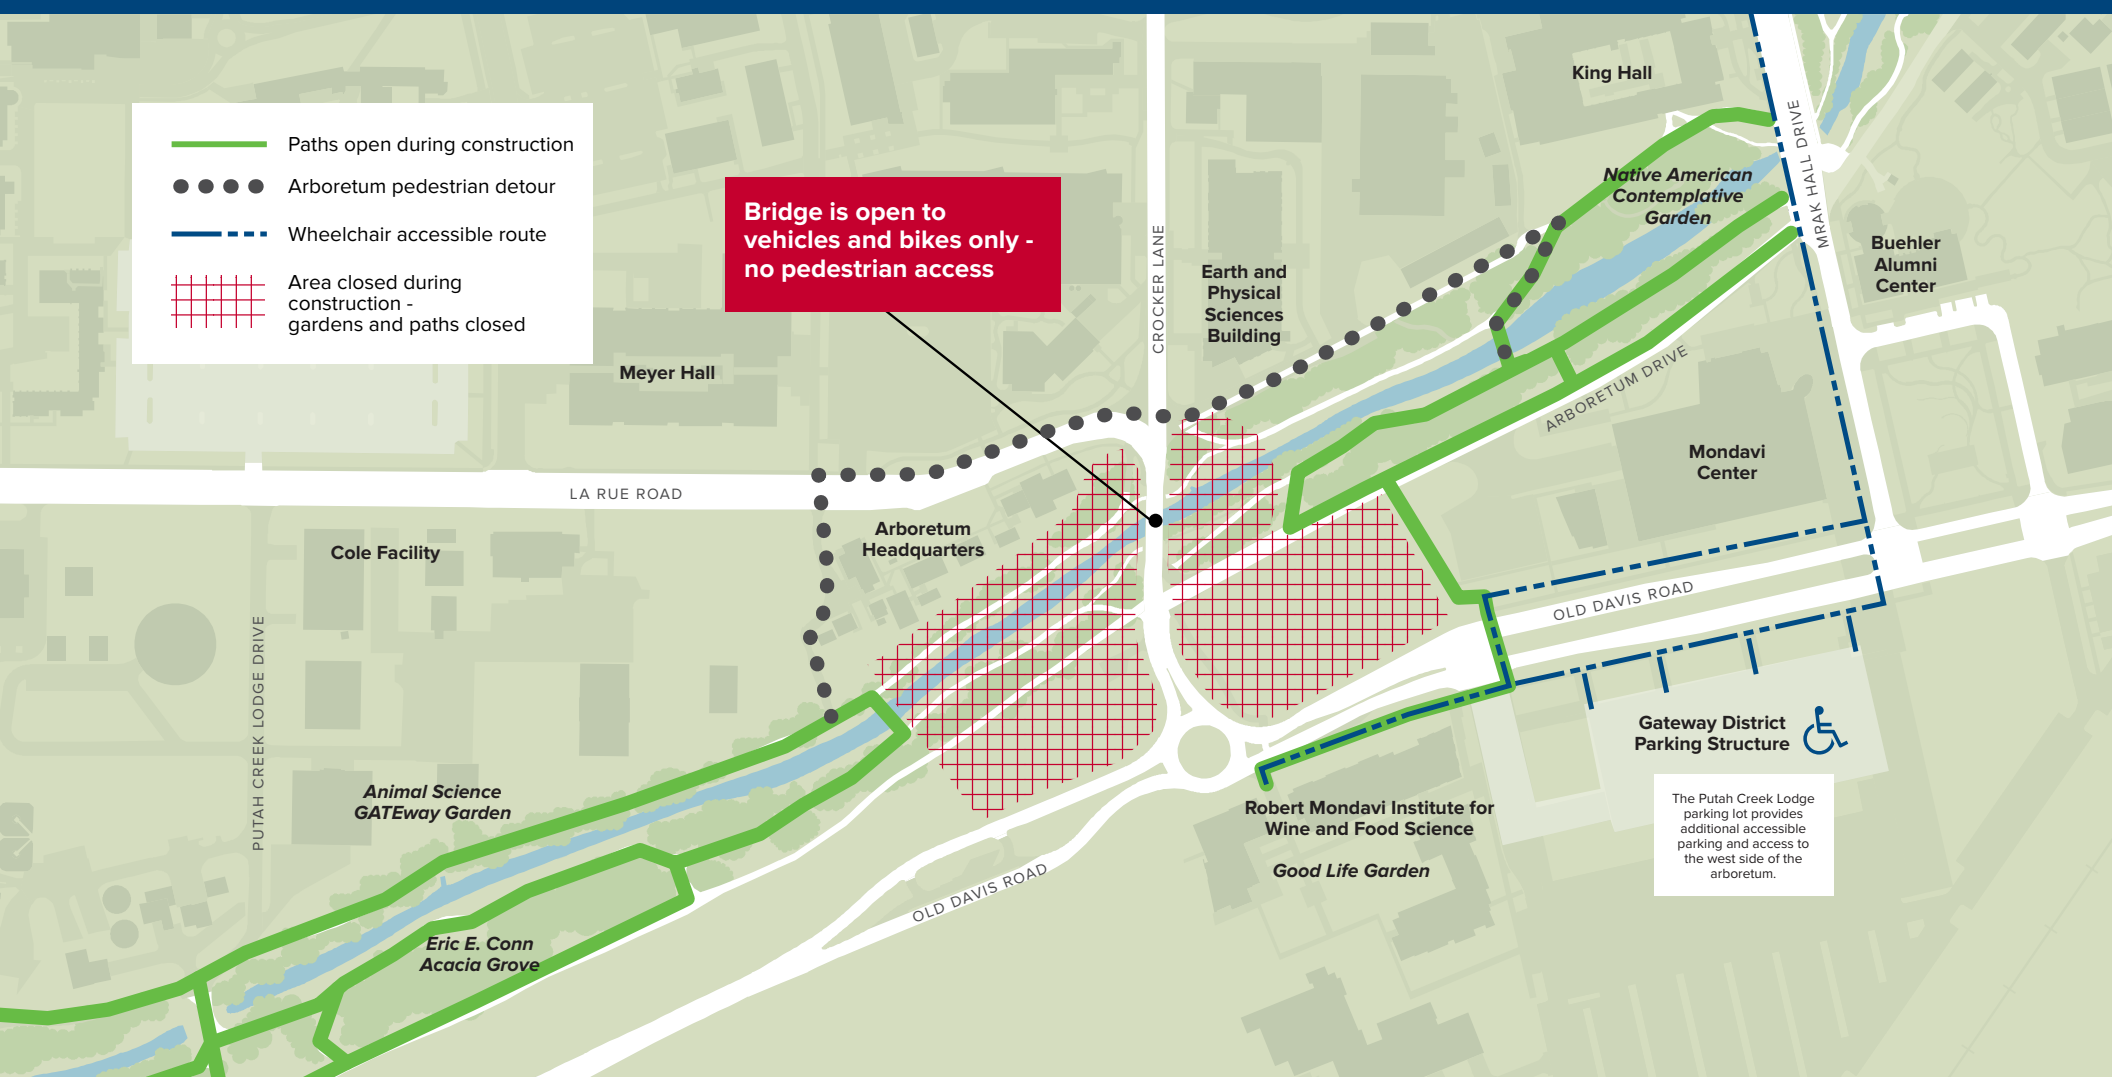

La Rue Bridge Replacement

To safely accommodate the increasing number of cars, bikes and pedestrians going to and from the expanding Gateway District, this project – majority-funded by the Federal Highway Administration – replaces this 32-foot-wide, almost-70-year-old bridge with a seismically safe, 52-foot-wide span including standard sidewalks and bike lanes. The project also includes the relocation of utility lines and multiple improvements to the Arboretum, including safer accessible path connections and irrigation upgrades.

Pedestrian Detours

Throughout construction, cars and bikes can cross the waterway in both directions. Where portions of the Arboretum are closed, visitors will find detours.
